QUESTIONS

1/In the book, the students are training to become the next generation of great explorers. What does exploration mean to you? Start by looking up the word in the dictionary. Then use your imagination!

2/Exploration projects happen all around the world and involve many scientific subjects, such as conservation, animal research, marine biology, and archaeology, plus many others. If you were an explorer, what would you study and where would you travel? Do some research to come up with a cool idea. Check out a map to select a location that is appropriate for your project.

3/Cruz Coronado, the main character in Explorer Academy, grew up in Hawaii and loves to surf. He says that it gives him a sense of calm and comfort, power and freedom. What favorite sport or activity makes you feel this way? Ask your family members the same question.

4/Cruz has a voice-activated honeybee drone named Mell which he uses to take aerial photos, send messages, unlock doors, and more. What cool invention do you wish you could create or have? How would you use it?
